2011 Asia-Pacific Forum on Mass Media  
and Education for International Understanding

# Natural Disaster Management

Bui Minh Hoa

Journalist,  
The World & VietNam Newspaper, Vietnam

Among all disasters, natural disasters are the worst. The Pacific Ocean is the largest and the deepest on Earth. The Asia-Pacific region will be affected when the earth is heating up. So, natural disaster management is a duty for humans, a duty for the Asia-Pacific countries.

The data on natural disasters worldwide have increased, and the damage it brings is terrible. It is mainly caused by people. With their development, people have unwittingly ruined nature, resulting in wanton exploitation and environmental pollution in many ways, causing the greenhouse effect. As a consequence, global warming occurs, leading to melting poles in the globe to create natural disasters such as tsunamis, volcanoes, etc.

In this presentation, I will introduce the article issued on The World & Vietnam Newspaper. This presentation is about natural disaster management. It explains causes of natural disaster and how to solve it. The natural disaster management is to "play by the rules of nature". The immediate solution is to reduce pollution. The countries are pledged to reduce the amount of exhaust gas emissions through the Kyoto Protocol. After that, this presentation will discuss a new treaty to replace the Kyoto Protocol which will expire in 2012.

Many countries have developed their own National Programs of Action for Response. We recognize the importance of environmental protection, and this forum is a result of this. But environmental protection activities and solutions of all countries are not all the same. So, we need the international cooperation.

I look forward to reflecting on the journalism profession and upgrading environmental protection activities and solutions of all countries. We should work together to manage natural disasters effectively so that we can live in harmony with nature.
